

## OUR SERVICE

Finally, a permanent valve system to help you gain quick control of your system! The EZ Valve II™, now available in 16" (available sizes 4" - 12", 16"), is a complete R/W valve that can be installed in under 2 hours with only one excavation needed. Unlike cutting in a valve, with the EZ Valve II™ system, you can install your valve under pressure without stopping service to your customers. RMS Utility Service's fully self sufficient team arrives at your jobsite ready to go without requiring you to provide workers for the job. Choose the EZ Valve II™ system for your next valve insertion project and get your system under control!

Improved Design

## FEATURES

The EZ Valve II™ is an excellent tool to gain critical control of your system. Works great in water and wastewater applications when you need to get quick control. With most applications able to be installed in under 2 hours, this system is a great solution to saving time so you can move on with your work. The R/W valve left in the system meets AWWA standards for permanent valve insertion and will be reliable for many years to come.

- **Control Time:** Installed in under 2 hours
- **Control Cost:** Single excavation means huge restoration savings
- **Control Service:** No service disruption to your customers
- **Control Quality:** Longer lasting ductile iron construction for dependability

Valve Insertion

**“ The EZ Valve II™ only requires a single excavation and is a very useful tool that is the perfect fit for our village's many applications ”**

Chris Settapani, Underground Utilities  
Superintendent, Village of Carpentersville, IL
